

Capillary state

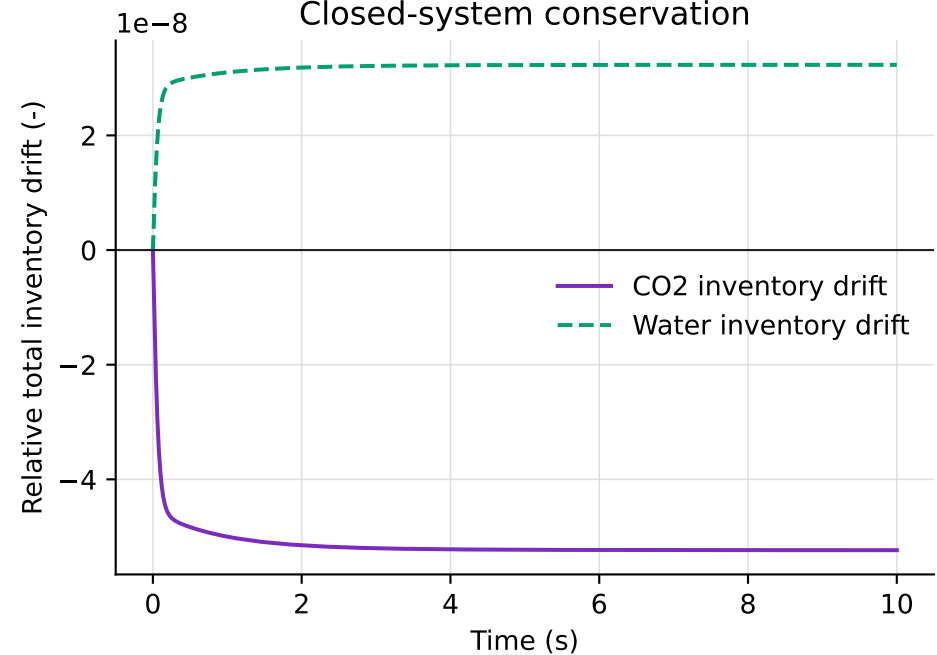

Imbibition response

Complementary phase response

Closed-system conservation

Reference

Closed compositional system; gravity and external mass boundaries are off.
Matrix water P_c is nonzero; fracture water P_c is the zero reference.

This run

Matrix water P_c : 515.98 -> 501.06 kPa.
Gas fraction: matrix 0.08964->0.05274; fracture 0.08973->0.12257.

Physical picture

Capillary suction draws water from the fracture into the matrix.
Matrix gas decreases, fracture gas increases, and total component inventories remain constant.
